DESCRIPTION

The **HCC4536B** (extended temperature range) and **HCF4536B** (intermediate temperature range) are monolithic integrated circuits, available in 16-lead dual in-line plastic or ceramic package. The **HCC/HCF4536B** is a programmable timer consisting of 24 ripple-binary counter stages. The salient feature of this device is its flexibility. The device can count from 1 to 2^{24} or the first 8 stages can be bypassed to allow an output, selectable by a 4-bit code, from any one of the remaining 16 stages. It can be driven by an external clock or an RC oscillator that can be constructed using on-chip components.

HCC/HCF4536B

Input IN1 serves as either the external clock input or the input to the on-chip RC oscillator. OUT1 and OUT2 are connection terminals for the external RC components. In addition, an on-chip monostable circuit is provided to allow a variable pulse width output. Various timing functions can be achieved using combinations of these capabilities. A logic 1 on the 8-BYPASS input enables a bypass of the first 8 stages and makes stage 9 the first counter stage of the last 16 stages. Selection of 1 of 16 outputs is accomplished by the decoder and the BCD inputs A, B, C

and D. MONO IN is the timing input for the on-chip monostable oscillator. Grounding of the MONO IN terminal through a resistor of 10K Ω or higher, disables the one-shot circuit and connects the decoder directly to the DECODE OUT terminal. A resistor to V_{DD} and a capacitor to ground from the MONO IN terminal enables the one-shot circuit and controls its pulse width. A fast test mode is enabled by a logic 1 on 8-BYPASS, SET, and RESET. This mode divides the 24-stage counter into three 8-stage sections to facilitate a fast test sequence.

FUNCTIONAL TEST SEQUENCE

Test Function has been included for the reduction of test time required to exercise all 24 counter stages. This test function divides the counter into three 8-stage section and 255 counts are loaded in each of the 8-stage sections in parallel. All flip-flops are now

at a "1". The counter is now returned to the normal 24-steps in series configuration. One more pulse is entered into In₁ which will cause the counter to ripple from an all "1" state to an all "0" state.
